DETAILED ACTION

Drawings

1. The drawings are objected to because they fail to clearly illustrate applicant's claimed invention. Please provide text labels for each component described in Figure 1. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacementdrawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/642,274

Art Unit: 2636

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Page 3

3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Flynn [U.S. Patent No. 3202963].

As for **claim 1**, Flynn discloses a power line warning apparatus, which comprises a core that annularly surrounds a power line so that a current in the power line induces a magnetic flux in the core (column 2, lines 1-5 and 34-40 and Figure 8). The core is made of any suitable core material (column 3, lines 19-23). Flynn also discloses a charging circuit that stores the voltage generated by the coil and generates a periodic trigger signal; and a flash lamp that flashes according to the periodic trigger signal (column 2, lines 41-60). The discharging of the capacitor is viewed as a trigger signal for the lamp to flash. Flynn discloses a coil, which is wound on the core so as to generate a voltage according to the magnetic flux in the core (column 2, lines 53-55 and Figure 8). Flynn also discloses an embodiment wherein a separate coil may be used to control the voltage, which will cause the lamp to flash (column 2, line 60 - column 3, line 15). Flynn does not specifically disclose the use of an iron core. It would have been obvious to one of ordinary skill in the art at the time of the invention by the applicant to include a iron core because Flynn suggest that any suitable material may be used as core material. One of ordinary skill in the art would have known that iron would be suitable core material because it is conductive. The use of an iron core as claimed by the applicant can be viewed as a matter of design choice.

Allowable Subject Matter

4. **Claim 2** is objected to as being dependent upon a rejected base claim, but it appears that the claim would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Though not used in a rejection, Berthiaume, Haus, Latorre et al, Milton, Anderson et al, and Fernandes all taught monitoring and indicating devices that were useful during the examination of this application.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric M. Blount whose telephone number is (571) 272-2973. The examiner can normally be reached on 8:00 am - 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey Hofsass can be reached on (571) 272-2981. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
